FINDING THE CORRECT PART NUMBER

* To determine the correct part number for your filter or filter adapter consult the application thread chart on this page. The chart lists the thread size and gasket size for most popular applications. Those applications listed with an "ST" have a standard 2-5/8" mounting surface. Those applications marked with a "LG" use a larger than standard mounting surface. Chassis and ground clearance should be checked to determine which length filter will fit best.

* CM filters can be cross referenced to other brands of spin-on filters. If you have a problem trying to find the thread and o-ring sizes required by your application, call, fax, or e-mail us with the part number of the filter you are using now. In most cases we can find the right filter for you.
